MAPLETS FOR CALCULUS: IMPROVING STUDENT SKILLS AND UNDERSTANDING IN CALCULUS

Douglas B. Meade Dept of Mathematics Univ of South Carolina Columbia, SC 29208 <u>meade@math.sc.edu</u> (803) 777-6183 Philip B. Yasskin Dept of Mathematics Texas A&M University College Station, TX 77843 yasskin@math.tamu.edu (979) 845-3734

Maplets for Calculus is a collection of 94 Maple applets for use by students and instructors in single-variable calculus. Come learn how your students can use Maplets for Calculus to practice specific calculus skills and how instructors can use Maplets for Calculus to improve student understanding.

Maplets for Calculus $(M4C)^1$ is a collection of 94 Maple applets that are useful both for calculus students and for instructors. The maplets in M4C provide interactive graphical user interfaces for typical examples and exercises on a variety of topics in single-variable calculus. Most maplets allow for problems to be either algorithmically-generated or userentered. The Maplets for Calculus balance the development of both understanding and technical skills. M4C is divided into the following eight categories:

- Pre-Calculus (22 maplets)
 - graphical properties of functions (translations, reflections, domain, range, asymptotes)
 - o absolute value, quadratic,, exponential, logarithmic and trigonometric functions
 - o review of trig
- Limits (8 maplets)
 - o conceptual understanding of limits and continuity, one-sided and two sided
 - ο ε-δ definition of the limit (graphical and formal proof)
 - o intermediate value theorem and bisection method
- Derivatives (24 maplets)
 - o basic principles: secant lines and tangent lines
 - practice with the terminology of derivatives and with making graphical connections between properties of a first or second derivative and the original function

¹ An expanded and updated version of Maplets for Calculus was completed in January 2008. A Table of Contents and sample videos of the Maplets for Calculus may be seen at <u>http://m4c.math.tamu.edu/</u>. The Maplets for Calculus are for sale to individuals at Maplesoft's webstore at <u>http://www.maplesoft.com/products/thirdparty/maplets_calc/</u> Faculty may contact the authors about site licenses and to obtain a username and password to preview them on a secure server.

- drill and practice on differentiation techniques (chain rule, implicit differentiation, logarithmic differentiation, inverse functions)
- applications (linear and quadratic approximations, related rates, motion, l'Hospital's rule, max/min problems)
- o antiderivatives and an introduction to the Fundamental Theorems of Calculus
- Integrals (28 maplets)
 - focused practice with specific integration techniques (substitution, integration by parts, trigonometric integrals, trigonometric substitution, partial fractions)
 - o drills for definite and indefinite integration
 - geometrical applications (area of a region, volume by slicing, volume of revolution, arc length, surface area)
 - o physical applications (average value, mass, center of mass, work, fluid force)
 - o numeric integration (left and right Riemann sums, trapezoid and Simpson's rules)
- Differential Equations (4 maplets)
 - drills for both separable and linear differential equations
 - direction fields
 - mixing problems
- Sequences and Series (4 maplets)
 - o general drills for limits of sequences and convergence of series
 - o more focused practice with geometric and telescoping series
- Curvilinear Coordinates (2 maplets)
 - identification of polar curves
- Games (2 maplets)
 - o plotting and cryptograms

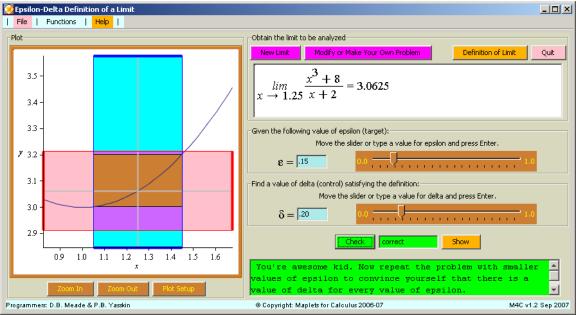

Students find the algorithmically-generated problems very helpful for practicing new techniques and for building confidence as they prepare for a quiz or exam. Immediate feedback and infinite patience are two features students find useful. Students find the hints and step-by-step checking of their responses as effective as a private tutor. For example, Figure 1 shows the Integration by Substitution maplet in which the user has omitted the differential in the substitution.

Instructors have multiple opportunities to use the Maplets for Calculus to enhance their courses. The ability to launch a Maplet with a specific example makes it convenient to use a Maplet for demonstrations and examples in a lecture. Plus, the extensive use of graphics – 2D, 3D, and animation – add to the impact that the Maplets can have in the classroom. Examples include the maplets: Epsilon Delta Definition of a Limit (Figure 2), Derivatives of Inverse Functions (Figure 3), Volume by Slicing (Figure 4) and Area as an Antiderivative (Figure 5). Others will find it more appropriate to develop a project or a lab that utilizes a Maplet in a guided-discovery exercise. For example, the Epsilon Delta Definition of a Limit maplet provides a graphical and interactive environment for exploring the ε - δ definition of a limit (Figure 2). Instructors can also have their students drill on difficult topics such as Indefinite or Definite Integration Techniques and Series Convergence Tests (Figure 6 — Figure 9).

The remainder of this paper shows snapshots taken from several different maplets in the M4C collection.

🧭 Integration by Substitution	<u>_ </u>
Indefinite Integral Use a substitution Definite Integral to compute the integral:	Quit Hint Syntax
Step 1 - Define the substitution: $u = x^2 - 8^* x$ $du = (2^*x - 8)$ Check	Show
Step 2 - Rewrite and evaluate the indefinite integral:	
Substitute in the indefinite integral: I Preview Check	Show
Compute the indefinite u-integral: I = Preview Check	Show
Step 3 - Rewrite the integral in terms of the original variable:	
Substitute back: I = Check	Show
In your formula for du, you forgot to multiply by dx.

Figure 1: Constructive feedback in the Integration by Substitution maplet. Note that the user has omitted the differential (dx) in their response for du.

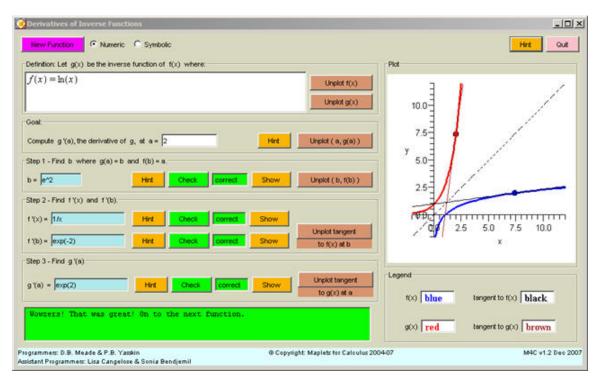

Figure 3: The <u>Derivatives of Inverse Functions</u> maplet, showing a function and its inverse along with tangent lines at mirror image points.

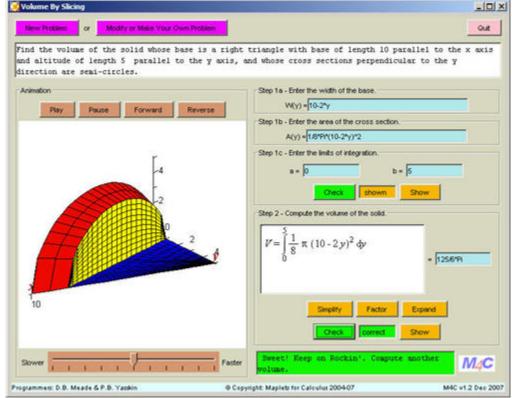

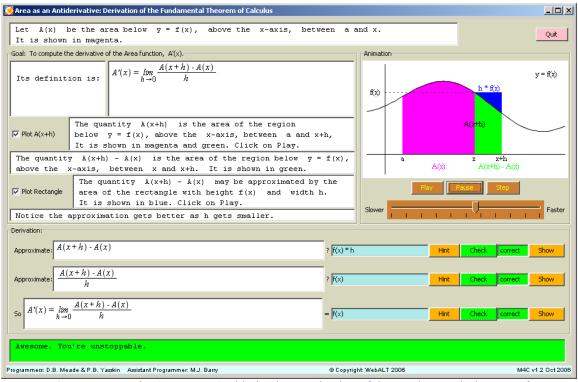

Figure 4: The <u>Volume By Slicing</u> maplet, showing one frame of the 3D animation and the emphasis on the setup of the definite integral.

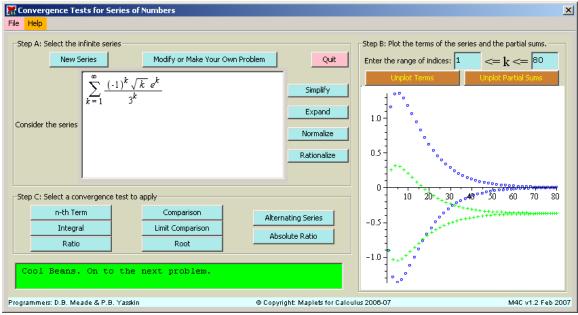

Figure 6: The <u>Convergence Tests for Series of Numbers</u> maplet. When users select a convergence test to apply, the test appears in a separate popup window. (See the next 3 figures.) Note the graphical display of the terms (blue) and the partial sums (green).
